- Continuous Unwind and Winding Lab
- Cast Film, Extrusion Coating & Laminating Lab
- Four Extruder Development Coex Sheet Lab
- Hi Tech Medical Tubing Lab in Clean Room Facility
- Screw and Barrel Design Lab
- Underwater/Water Ring Pelletizing and Plastics Compounding Lab

# Advanced Overview

## Research and Technical Centers

To keep up with the latest product developments in the extrusion coating, liquid coating, films and pelletizing industries, there is great value in understanding your own production capabilities. In our fully equipped research and technical centers, our process engineers work with you to develop new production processes, formulas and applications. Each of our seven laboratory facilities serves as a testing ground for new products, technologies and machine capabilities. Whatever it takes to ensure you have a superior product, is what we'll strive to do.

## Service, Spare Parts and Installation

Davis-Standard, LLC supports the most advanced technology in the business with the most comprehensive service and support system in the industry. We are on call to support you 24 hours a day, seven days a week. Our team of spare parts specialists can provide assistance in identifying and securing parts for your equipment. They are committed to getting orders entered, processed and shipped as quickly as possible to avoid downtime. When it comes to installation, we focus on single source responsibility by hiring, scheduling and supervising each subcontractor. Our team will check, calibrate and start-up all machinery systems to support an on-time and on-budget installation.

## Equipment Upgrades

Very rarely are current products and customer requirements the same as they were when you purchased your equipment. We can improve or add new capabilities to your existing equipment at a fraction of the cost and time associated with the purchase of a complete line.

Our services include:

- Replacement or upgrades of old and/or obsolete electronics
- The addition of new process capabilities
- Product enhancements that increase productivity and reduce waste
- Custom and confidential modifications to meet unique requirements

## Engineering Services

We can improve your business by offering some of the most highly skilled and experienced people in the flexible web converting and pelletizing industries. Our specialists can identify equipment and process related issues that hinder productivity and product quality. All assignments are handled in a highly confidential manner.
