

DAVIS-STANDARD®

Where your ideas take shape.

Extruder

Super Blue® Extruders

Overview

The high-performance, cost-competitive Super Blue® extruder model is engineered for custom profile and tubing applications as well as fiber, sheet, and basic wire and cable processes. Advantages of this design include double reduction gearboxes with helical carburized gears, an integral high capacity thrust bearing, cast iron feed section, bimetallic barrel and heated clamp arrangement, DSBM-T™ barrier mixing feedscrew and integrated control cabinet.

Features

- Rugged design that is easy to maintain and energy efficient
- Increased torque capacity to handle high viscosity resins
- Supported by a three-year warranty and variety of DSB® barrier screw designs.
- 24:1 and 30:1 models are available in 2-inch (50mm), 2 ½-inch (63mm), 75mm, 3 ½-inch (90mm), 100mm, and 4 ½-inch (114mm) sizes

Drive Unit

AC drive and power unit is engineered for a range of polymer requirements. Molded notch V-belt technology enables positive transmission of power from the motor to the gear reducer.

Gear Reducer

Double-reduction helical gearing is simple and durable. Unique built-in circulatory lubricating system supplies the gear mesh, all radial tapered roller bearings, and integral assembled thrust bearing. The thrust shaft is mounted on pre-loaded radial bearings to maintain perfect screw-to-barrel alignment. A low gear tooth velocity provides quiet operation. Gearing is manufactured to AGMA specifications.

Feed Section

Consists of machined, high-strength casting cored for water cooling, and a two diameter-long feed opening for receiving polymers from a hopper with a slide gate. Hopper features dump drain and fixed screen guard for operator safety during feeding.

Barrel and Feedscrew

The one piece bimetallic barrel is designed for operating pressures up to 10,000 psi and is matched with a high-performance DSBM-T™ barrier screw as standard.

Temperature Control

Each zone is equipped with cast aluminum heaters. Blowers are used for air cooling and zones are insulated to prevent air leakage. Dual hoods provide thermal protection.

Control Cabinet

Controls are easily accessible with plug-in temperature controllers for each barrel and die zone. The drive control station contains a screw speed indicator, drive load meter, and pilot on-off controls. A step-down die transformer is included. Die wiring plugs directly into the control cabinet.
