

DAVIS-STANDARD®

Where your ideas take shape.

Ozone System

Transform your extrusion coating process effortlessly

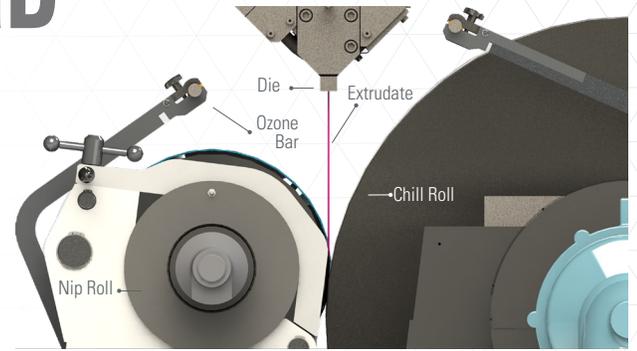

Are you experiencing adhesion challenges with your extrusion laminator? Elevate your production with the Davis-Standard Ozone System, where innovation meets results. Our customers swiftly discover the benefits – manufacturing superior-quality products at significantly accelerated line speeds.

The Ozone System gives you the freedom to lower the die towards the chill roll, boosting cross-machine stability and minimizing neck-in. Davis-Standard goes the extra mile by providing optional features like an ozone extraction system for ventilation and retractable ozone bars compatible with an automatic drool tray.

Not only do you lower resin temperatures, but you also achieve enhanced adhesion, leading to improved chill roll capacity and a reduction in your packaging taste and odor. The results? A smoother operation and heightened energy efficiency. And for those seeking even more adhesion, inquire about our cutting-edge corona treaters.

Applicable Processes:

Extrusion Coating, Laminating, Flexible Packaging

KEY FEATURES

Quality

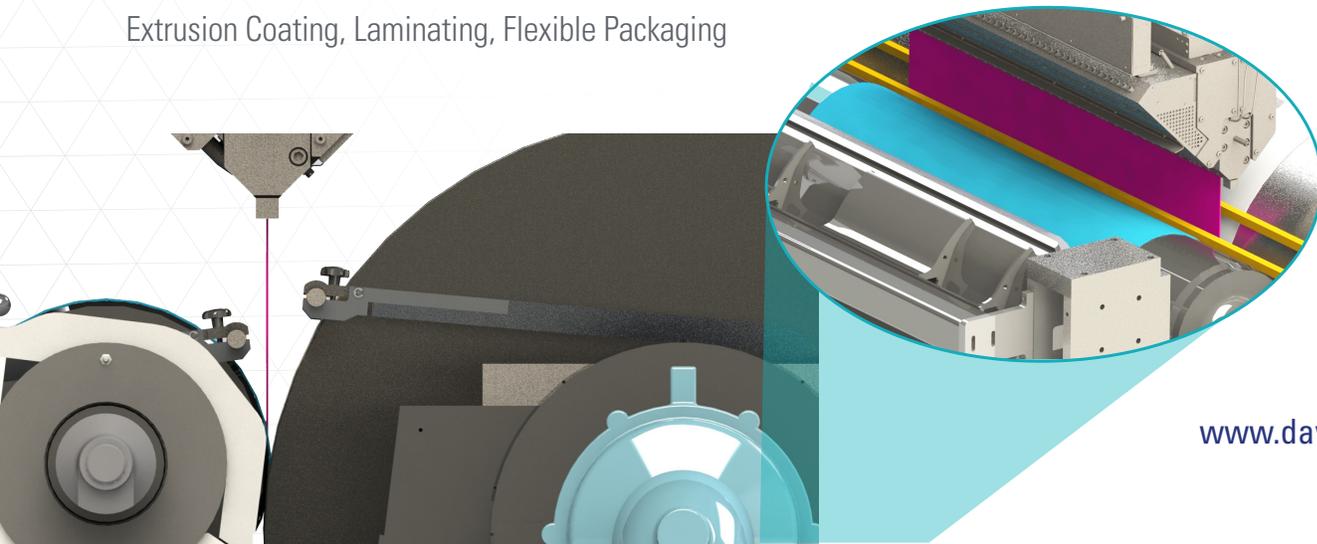

- Reduced odor/taste in the end product.
- Improved adhesion.

Increase Uptime

- Reduced neck-in.
- Faster line speeds.

Flexibility

- May be used with, or in place of, a corona treater.
- Can be installed in almost any extrusion coater.
