Splice Table

Seamless Possibilities that Give Time Back to Your Operations

Splicing rolls on an unwind should be a seamless process with minimal downtime. The Deacro Splice Table does just that, allowing your operator to accurately and efficiently join two webs without all of the hassle. Mechanical clamps secure the web, while a guide ensures a straight cut allowing a uniform transition every time, and without the downtime of a manual edit.

Applications

- Device is designed to fit into existing space on rewinder.
- Accommodates angled splices for better alignment on printed materials.
- Semi-automatic taping option.
- Semi-automatic cutting with shear blade option.

Optimize Productivity

- Reduces amount of time added during the process to manually edit

Quality

- Reduces defects such as web breaks, lane misalignment, and non-uniform rolls
- Reduces product waste
- More accurate alignment of webs
