Web Guides

## Precision and efficiency for your web handling needs

Are you facing challenges with web tracking that are affecting your product quality? Whether you are adding new or updating an existing web guide Davis-Standard is here to collaborate with you on effective solutions for your manufacturing needs.

Web guides are an ideal solution for your printing, coating, and laminating processes. The guides can be optimized to handle diverse materials such as paper, film, foil, and other substrates. They significantly reduce issues by controlling lateral web position, minimizing misalignment, and guiding materials seamlessly through the production line.

Add precision and efficiency to your web handling and create an effective and sustainable manufacturing process. In return, experience a reduction in edge trim waste, downtime, and operator interventions.

Applicable Processes:

Extrusion Coating and Laminating, Liquid Coating, Cast Film, Blown Film, Converting

KEY FEATURES

Quality
- Precise control maintains consistency of final product.

Flexibility
- Adaptable to multiple materials.
- Available as a retrofit to existing lines.
- Edge, center and randomizer options available.

Uptime
- Automated quick and continuous adjustments — optimizing. efficiency.
- Reduced operator interaction.

Cost Savings
- Reduces waste.
- Minimizes downtime caused by web misalignment.
